

André Steenhoff Madsen

PROFILE

- Analytical, solution-oriented, and quality-focused developer with a Bachelor's degree in Software Development.
- Experienced in C#/.NET, TypeScript, and React.
- Experience working according to SCRUM principles during development.
- Focuses on DRY and SOLID principles during development.
- Uses Entity Framework Core and has gained a solid understanding of SQL through its use.
- Uses Git for development and keeps all previous code on GitHub.
- Interested in Cloud technologies, Azure, and Microservice architecture.
- Quick to understand new programming languages and capable of learning them quickly.

COMPETENCIES

C# / .NET

Typescript

Entity Framework Core

GIT

Scrum

React

Uno Platform

WORK EXPERIENCE

Software Developer • *Odense Mobil Rep*

Freelance

06-05-2026 - 19-06-2026

Developed a complete desktop application for registering mobile phone repairs in approximately 54 hours. The solution was built using C#/.NET 10, Uno Platform, and Entity Framework Core (SQLite). Used AI - primarily ChatGPT - as a development assistant for brainstorming, code reviews, ideation, and parts of the implementation work, while the overall architecture, technical decisions, integration, testing, and quality assurance were carried out and verified manually.

The project's source code is publicly available on GitHub:

- <https://github.com/andr9528/Odense-Mobil-Reparation>

Software Developer • *Flowpoint Defence A/S*

26-05-2025 - 22-06-2025

Due to an NDA, I can only mention that I contributed to the development of C# software used to automate processes for the navy.

Software Developer • *Nørgård Mikkelsen*

NUnit / Moq / Fluent Assertion

Framework

SQL

Azure

COBOL

Angular

Java

C++

Python

LANGUAGE

Dansk - Native

Engelsk - Fluent

Tysk - Beginner

17-03-25 - 11-04-25

Using C# and Uno Platform as the frontend framework, I developed a program for registering and executing prompts for AIs. Their responses were stored in a PostgreSQL database for statistical analysis. The project is open source and available on my GitHub.

- <https://github.com/andr9528/gaio>

Software Developer • *Fashionhero*

06-05-24 - 31-05-24

Using C#, I transformed XML warehouse data from one format to another to support a new sales portal. This included a local SQLite database as an intermediary layer, which I read and wrote using Entity Framework Core. The project is open source and can be seen here.

- <https://github.com/FashionHeroOnGit/PortalProject>

Software Developer • *TV 2 DANMARK A/S*

01-04-22 - 31-12-23

Part of a developer team working under SCRUM to develop and improve a range of internal tools, some of which remain open source. During my time here, I learned and developed in TypeScript / React, and a bit of Angular.

I also became familiar with Jira, Confluence, and Lucid Chart, which were among the tools used by the team. One of the main projects I contributed to is linked below.

EDUCATION

Software Development • *University College Lillebælt*

Bachelor's Degree

01-02-19 - 19-06-20

Subjects I particularly excelled in include .NET Core, Database, and Testing.

Computer Science • *University College Lillebælt*

Associate Degree

01-09-16 - 31-01-19

Learned to read and create various UML models as part of training in SCRUM-based software development.

Higher Technical Examination (HTX) • *Svendborg Erhversskole*

Technical High School

COURSE

Oracle Java SE 8 Programming

25-05-2021 - 05-07-2021

Course in Java SE 8 development — learned Java syntax and programming fundamentals.

Specialisterne Academy • *Kochsgade 31, 5000 Odense C*

02-02-2026 - 30-04-2026

Strengthened my experience with C#, Entity Framework Core, and Uno Platform through a series of smaller projects. The projects included:

- A Wordle game.

- A program for downloading primarily PDF files, with a focus on performance

Creation of an API for existing database data.

- A full-stack inventory management system developed as a group project.

The final part of the course included the opportunity to work on a range of self-selected projects, where I chose to complete a series of assignments focused on learning COBOL.
